Hi Ernie,

I just wanted to check in with you about the water topics. A faculty member contacted me just today – I have several people on board from Environmental Health, Civil Engineering, and the Center for Conservation Development. We look forward to seeing how your needs align with our resources.

Do you have any thoughts about the Center for Conservation Development proposal? I'd like to get your temperature reading on that as well so that I can bring input back to that team,

Thanks Ernie,
Kim

Subject: CSU Research Possibilities

Hi Ernie and Javier,

In follow-up from our conference call on Friday, I wanted to let you know that I spoke with several faculty and they will be ready to receive your brief document describing the types of research and outcomes MIRA is inviting from CSU.

As well, I am attaching a proposal from our Center for Conservation Development. I've been in dialogue with these faculty for several months, talking with them about Tres Santos, CSU's presence within the footprint of Tres Santos, and sharing your website information which shows your goals for sustainability and environmental responsibility. These professors have a track record of excellence in advising and partnering with projects, and setting community standards for conservation development. Please review their brief proposal to see how it aligns with your needs. I'm confident the direction of this proposed research could be tailored and co-developed according to your priorities, through conversations with Drs. Liba Pejchar and Sarah Reed.

We look forward to your email about Water research. As always, please let me know how I can assist or facilitate next steps.

Warm regards,
Kim
