Concerning the decision to implement paid parking at the Foothills campus (ARBL, ERL, and ETRC):

We, the undersigned, have numerous concerns about the current proposal. Generally speaking, our position is that the Foothills campus does not require a major overhaul of its current parking arrangement, for the following reasons:

- Significant financial hardship on ARBL, ERL and ETRC farm workers in context of strain on salaries to purchase an A or similar tag.
- Foothills campus is a rural area with all types of animals (wild and domesticated). Construction would disrupt breeding season and the safety of the animals.
- Some asphalt projects that were built without CSU funds (ERL & ETRC asphalt for example).
- Negative impact on facilitating student parking on foothills for those in work-study, interns who live on the property, internships, honors research, graduate school, professional veterinary school, postdoctoral studies, DVM resident training, vet students participating in week long rotations – Jr. & Sr. Practicums or simply part-time student workers.
- Negative impact on fee-for existing parking and fines for parking in our current parking areas for ERL, ARBL and ETRC trucks and trailers.
- Need for ground water studies on drainage for new areas proposed to be paved that currently are not necessary or paved.
- Negative impact on outreach programs held for the community at ARBL, ERL and ETRC in context of parking permit issues. (Rodeo, Polo, LOR sale and Special Events at ETRC; ERL has continuing education events for short courses, AAEP events that are coordinated outside of our office who share our classroom and examination areas.)
- Some professors decide to have a lab or special class at the ERL that are normally held elsewhere.
- Negative impact of more regulatory and fee structures, when this is not necessary.
- Finding parking at Foothills has never been a problem. Unlike Main Campus and the VTH, there are more than enough spaces for everyone.
- It is our understanding that many of the proposed renovations are meant to improve the general appearance of the Foothills parking lots. However, we have no issues with the appearance or maintenance of the lots as is. The addition of more asphalt is unnecessary and unwanted. Furthermore, the current gravel lots are useful for rinsing trailers and unloading animals.
- Unlike Main Campus and the VTH, employees who work at the Foothills campus have no convenient alternatives for off-campus parking. Several staff have tried to use the bus. It adds an hour both morning and night to their commute.
- The BMS department, in collaboration with CSU, has taken steps to encourage and prioritize undergraduate involvement in laboratory settings. It is our position, however, that the proposed parking plan will undermine this initiative and make it difficult to attract undergraduates to work at the Foothills. We are also concerned that the cost of paid parking may hinder recruitment across all levels of technical expertise, e.g. graduate students, postdoctoral candidates, and interns at the ERL
- It is our understanding that alternative forms of transportation are being considered to facilitate access for those who might not be able to pay for a permit. However, we believe that these alternatives are inadequate and potentially unsafe. Select agent transport requires the use of a personal vehicle, and bus routes cannot be relied upon for necessary

late-night and weekend access. Bicycle transportation is inconvenient, especially in the winter, and potentially unsafe given our proximity to wildlife. (Mountain lions have been sighted at the Foothills campus as recently as September.)

We also have several practical concerns that we would like to see addressed in further detail.

- At least one major construction project is planned for the Foothills campus in the near future. We have concerns that heavy construction equipment and vehicles will damage any newly paved lots and impose unnecessary maintenance costs. Is this being taken into consideration?
- How would the proposed paving impact the wildlife at the Foothills campus, both during and after the paving itself? We would like to see an environmental impact assessment (EIA) incorporated into the decision-making process.
- Finally, it is our position that the overall process of communicating this proposal to the affected parties has been lacking in transparency, detail, and adequate opportunities to provide feedback. Many who attended the PTS meetings from September 26 to October 2 found them to be confusing and structured in such a way as to discourage meaningful conversations about the proposal.

We understand that some of the proposed changes may involve improvements to handicapped parking spaces, which we are not opposed to. Furthermore, we anticipate that some of our general concerns may be addressed in more detail as more specifics about the plan come out. However, it is our position that only limited improvements are required, if at all, and that imposing a paid parking structure is therefore an unnecessary hardship for those who work at the Foothills.

We look forward to further discussions and open forums. Thank you for listening to our concerns.
